

Low Flow Rotameter

Our range of low flow rotameters are widely acknowledged for their accuracy, reliability and long service life. These rotameters are suitable for purging or low flow rate of air or liquid measurement. Available in different ranges, our range comes with various accessories such as DP regulator, panel mounting clamps and high & low flow alarms.

[MODEL:CVG.LFR]

Technical Specification:

- Suitable for purging or low flowrate measuring. The standard mounting is ¼"
- BSP rear, although several arrangement of flanged or hose pipe connections
- are offered on request.

Ranges:

- 0.6 to 160 LPH of water at ambient temperature.
- 10 to 5000 NLPH of air at NTP. Accuracy: + 2 FSD.

Accessories:

- Built in needle valve.
- DP regulator.
- Panel Mounting Clamps.
- High & Low Flow Alarms.
