

Metal Tube Rotameter

We have with us a range of metal tube rotameters, that are available in varied sizes and temperature ranges. These type of rotameters are suitable for metering of translucent and opaque fluids under high operating pressure and temperature. Sourced from well reputed manufacturers of industry, these are widely acknowledged for their dimensional preciseness, accurate results and compactness.

[MODEL:CVG/MTR]

Technical Specification:

Suitable for metering of translucent / opaque fluids under high operating pressure and temperature.

Available Sizes:

In 316 SS construction with flanged connections in line size from 20 NB to 100 NB

Ranges:

100 to 60.000 LPH of water at ambient temprature. 2.5 to 1700 Nm³/hr of air at NTP.

Accuracy :

± 2% of FSD & ± 1.5% of FSD on request.
